

## STORM STAY

**Materials:** Solid Stainless Steel

### SA 01 Storm Stay

These stainless steel storm stays serve two purposes. In the locked position, the stays draw the storm window sash tight against the blind stop or exterior casing assuring a draft free fit. Alternatively, the stays can be released in a moment and prop the sash open for ventilation during pleasant weather.

The stays remain on the storm sash when the storms are removed for the season leaving only the small keeper on the window frame.

Available in two finishes.
