

ADD ON WEIGHT

SRS AOW Add on Weight

SRS AOW Add on Weights are designed to quickly and easily correct slightly out of balance sash. These weights are ideal for home owners with that one troublesome window who want the quickest, most cost effective alternative to fastening and unfastening sash cords.

Each ½ pound weight consists of a 1³/₈" dia. cast iron body and a steel taper pin. The body has a ½" diameter hole through the center and a 3³/₈" wide slot along its length to allow it to simply slip onto the sash cord without having to unfasten the existing weight. Dropping the taper pin into the top of the slot firmly locks the weight onto the chain. Once you have removed the weight pocket cover and have access to the sash cord, installing the weight takes under 10 seconds.
